## TP308 Series <br> Micro Switches

## MICRO SWITCH <br> TP308 SERIES

## - FEATURES

- 1-piece spring mechanism design offering durable acute operation and nice touch feeling
- Heavy/Light operation force specifications
- High flux-tight structure
- High solder reliability
- RoHS Compliant

## APPLICATIONS

- Communication equipment
- Security systems
- Office automation appliances
- General industrial machines

## SPECIFICATIONS

| $\bullet$ Ratings | 125VAC 3A; 125VAC 1A |
| :--- | :--- |
| $\bullet$ Circuit arrangement | Single pole Double throw (1c), snap action |
| $\bullet$ Pitch between terminals | 5.08 mm |

## 1.ELECTRICAL PERFORMANCE

| - Insulation resistance | $100 \mathrm{M} \Omega \mathrm{Min}$. at 500 VDC |
| :--- | :--- |
| - Dielectric strength | $1000 \mathrm{VAC} \mathrm{Min} .\mathrm{for} \mathrm{60sec}$ |
| - Initial contact resistance | $100 \mathrm{~m} \Omega$ Max. |

## 2.MECHANICAL PERFORMANCE

| - Operating Force (OF) |  |
| :--- | :--- |
| Release Force (RF) <br> Pre-travel (PT) <br> Operating Position (OP) <br> Free Position (FP) | see attached drawing |
| - Vibration Resistance(Without lever) | 10 to 55 Hz amplitude of 1.5 mm |
| - Terminal strength | $1.2 \mathrm{Kg}(1$ minute) in the direction of the axis of solder <br> terminals |

## 3.ENVIRONMENTAL

| - Ambient temperature | $-25^{\circ} \mathrm{C} \sim+65^{\circ} \mathrm{C}(60 \% \mathrm{RH}$ Max. with no icing $)$ |
| :--- | :--- |
| - Ambient humidity | $+5^{\circ} \mathrm{C} \sim+35^{\circ} \mathrm{C}(85 \% \mathrm{RH}$ Max. $)$ |

## 4.DURABILITY

| - Mechanical life | $1,000,000$ cycles Operations |
| :--- | :--- |
| $\bullet$ Electrical life | 10,000 cycles Operations |

## 5.CORRECT USE

- Terminal Connection:

When soldering a lead wire to the terminal, first insert the lead wire conductor into the terminal hole and then perform soldering.
Make sure that the capacity of the soldering iron is 30 W maximum and that the temperature of the soldering iron tip is approximately $300^{\circ} \mathrm{C}$. $\left(350^{\circ} \mathrm{C}\right.$ maximum) Complete the soldering within 3s.
Using a switch with improper soldering may result in abnormal heating, possibly resulting in burn.
Applying a soldering iron for more than 3s or using one that is rated at more than 30W may deteriorate the switch characteristics.
When soldering the lead wire to the PCB terminal, pay careful attention so that the flux and solder liquid level does not exceed the PCB level.

- Operating Stroke Setting:

Take particular care in setting the operating stroke for the pin plunger models. Make sure that the operating stroke is $70 \%$ to $100 \%$ of the rated OT distance. Do not operate the actuator exceeding the OT distance, otherwise the durability of the Switch may be shortened.
